

**MINERAL COMPOSITE**

# SHOWER BASES

mti BATHS

One-piece construction mineral composite shower bases provide a modern and smart choice for shower floors. Available in multiple sizes and color options, this cast stone alternative, combined with organic textures, is the luxury addition to a sleek bathroom design.

MTI Baths technology offers a premium and a value mineral composite base option, both made of durable mineral composite mixture, combined with casting resin, molded and specially coated. All bases are low-profile and multiple-threshold, meaning they can be ordered to accept glass enclosures on one, two or three sides.

# MINERAL COMPOSITE SHOWER BASE CLEANING CARE

Mineral composite has a stain-resistant, non-porous surface. With normal use, this surface will retain its inherently glossy appearance with only a minimal amount of care.

**Cleaning up after installation**

- Rinse the shower base with cold water after each use.
- Use a rubber wiper to ensure that water does not get stuck in the shower base.

**Daily cleaning habits**

- Use a mild or soft cotton dish cloth (non-abrasive), water and soap with neutral pH (non-greasy) such as Dawn Dish Soap Platinum or Palmolive Dishwashing Liquid.

**Anti-limescale maintenance**

- Mix one part limescale cleaner to three parts water (1:3 ratio).
- Remove the grid.
- Apply the diluted product over the entire surface with the help of a soft cloth.
- Leave to act for 15 minutes.
- Rinse with plenty of water.
- Perform this periodic cleaning every 10 days.

*WARNING: Never use rough scrub, solvents, alkaline, acid or abrasive products.*

**General care**

- Do not allow the mineral composite surface to come into contact with nail polish, nail polish remover, Wintergreen oil, dry cleaning solution, lacquer thinners, gasoline, pine oil, etc.
- Avoid using razor blades or other sharp objects that might scratch the surface.
- The manufacturer strongly recommends a professional surface repair person for deep scratches, chips or gouges.
- Damage occurring to the unit during installation is the responsibility of the installer, and after installation, the responsibility of the user.
