Mineral Composite Shower Bases Cleaning Care

Mineral composite has a stain-resistant, non-porous surface. With normal use, this surface will retain its inherently glossy appearance with only a minimal amount of care.

Cleaning up after installation

- Rinse the shower base with cold water after each use.
- Use a rubber wiper to ensure that water does not get stuck in the shower base.

Daily cleaning habits

- Use a mild or soft cotton dish cloth (non-abrasive), water and soap with neutral pH (non-greasy) such as Dawn Dish Soap Platinum or Palmolive Dishwashing Liquid.

Anti-limescale maintenance

- Mix one part limescale cleaner to three parts water (1:3 ratio).
- Remove the grid.
- Apply the diluted product over the entire surface with the help of a soft cloth.
- Leave to act for 15 minutes.
- Rinse with plenty of water.
- Perform this periodic cleaning every 10 days.

WARNING: Never use rough scrub, solvents, alkaline, acid or abrasive products.

General care

• Do not allow the mineral composite surface to come into contact with nail polish, nail polish remover, Wintergreen oil, dry cleaning solution, lacquer thinners, gasoline, pine oil, etc.
• Avoid using razor blades or other sharp objects that might scratch the surface.
• The manufacturer strongly recommends a professional surface repair person for deep scratches, chips or gouges.
• Damage occurring to the unit during installation is the responsibility of the installer, and after installation, the responsibility of the user.

SculptureStone® Shower Bases Cleaning Care

General care

- Use common household, non-abrasive cleaners for most cleaning jobs. A mild liquid dish detergent diluted in warm water is sufficient for everyday cleaning. Rinse well and dry with a soft, clean cloth. Remove dust or dry dirt with a soft, damp cloth.
- Avoid using razor blades or other sharp objects that might scratch the surface.
- Clean grease, oil, paint or ink stains with isopropyl (rubbing) alcohol. Dry with a soft, dry cloth.

Deep cleaning

- For more stubborn stains, use a mild abrasive cleaner such as Soft Scrub or Bon Ami. DO NOT USE the green Scotch Brite pads on the solid-surface shower bases as it will destroy the finish. Do not use artificially colored cleaners.
- Do not use harsh chemicals, such as hydrochloric acid, sodium hydroxide, paint thinner, chloride solvents or any strong acid or base, as this will permanently damage the finish.

Surface repair

- Small scratches may be removed by sanding with 1500 grit wet/dry paper and then cleaning with Soft Scrub.

REMEMBER— If you do damage the shower base, minor cuts or scratches can usually be buffed or polished out of the finish.

Acrylic Shower Bases Cleaning Care

General care

- Do not allow nail polish, nail polish remover, hair dye, Wintergreen oil, dry cleaning solution, lacquer thinners, gasoline, pine oil, etc. to come in contact with the DoloMatte surface.
- Avoid using razor blades or other sharp objects that might scratch the surface.
- Be sure to check the product label. Some products, although not containing abrasives, WILL damage the product over time.

Deep cleaning

- For more stubborn stains, a mild abrasive cleaner such as Soft Scrub, Bon Ami or Barkeeper's Friend may be used. A gray or red Scotch Brite pad may be used.

Surface repair

- Small scratches may be removed by sanding with 600 grit wet/dry paper followed by cleaning with a mildly abrasive cleaner such those noted above. MTI strongly recommends contacting a surface repair professional for deep scratches or chips.
